

## QLIKVIEW ON MOBILE

QlikView provides professionals on the go with the BI industry's most powerful and engaging mobile experience. It features a compelling browser-based user interface fueled by the power of QlikView 10 server to deliver unprecedented freedom to mobile workforces. Users can simply jump in and become instantly productive.

With QlikView on Mobile, users get the complete QlikView Business Discovery experience, including interactive analysis, rich visualization, and associative search capabilities. QlikView delivers live data from any source, specific to user needs, anywhere and anytime decisions are made. As the only true Business Discovery solution on mobile, QlikView offers the consumer-like experience users seek, while providing IT the security and manageability it requires.

### TAKES FULL ADVANTAGE OF TABLETS

Tablets are the ideal mobile BI form factor. They're portable, yet have rich, large displays and enough processing power to satisfy the requirements of demanding business users.

QlikView on Mobile takes full advantage of the large touchscreen interface and offers an ideal way to benefit from business discovery applications on the go. QlikView provides complete touch capabilities, including scrolling and selection in any list box, table, chart or graph, and the ability to cycle through charts, graphs and sheets. QlikView also supports native iPad capabilities like pinch to zoom, adjusting for the tablet's orientation, and bookmarking QlikView applications for direct access from the iPad desktop.

### ACCESS ALL YOUR DATA

QlikView provides analysis and search across a complete set of up-to-date information. QlikView combines data from any number of sources with high performance, providing the fastest way to gain insight into your business across functions and data silos. With QlikView, there are no static views or pre-defined calculations, allowing a virtually unlimited number of questions and follow-up questions to be asked.

### ONE QLIKVIEW, ANY DEVICE

QlikView on Mobile is provided free as part of QlikView 10 server, supporting the iPad, iPad 2 and other mobile devices with HTML5-capable browsers.

- Delivers the same QlikView experience across desktop, laptop and mobile platforms
- Recognizes mobile browsers and enables touch functionality as needed
- Offers access to a complete set of live data from multiple sources
- Provides the security and manageability of QlikView server architecture

Extend the reach of your QlikView applications. Deliver Business Discovery to mobile users worldwide. Put the simplicity and power of QlikView's associative experience in the hands of business users on the go.

## QlikView for Mobile provides anytime, anywhere access

### ONE QLIKVIEW, ANY DEVICE

QlikView is the only solution to offer true business discovery in a cross-platform, browser-based interface. This means that applications can be built once and accessed on any device, whether it's a desktop, laptop, tablet, or smartphone. By taking a 'build once deploy anywhere' approach, companies can reduce the burden associated with maintaining multiple versions of applications required by native clients for specific platforms. And users benefit from having a single, consistent QlikView experience across devices.

### MANAGEABLE AND SECURE

QlikView on Mobile benefits from QlikView's enterprise-proven server architecture. It gives organizations a unique combination of control at the center and flexibility at the edges. Because management and security are server capabilities in QlikView, the same access to applications and data entitlements apply regardless of the device used to access applications. And with a browser-based solution, there's no dependency on third-party app stores or approval processes, reducing risk and keeping activity inside the firewall.
